A: You could: clean your first instance: rm -rf ~/.local/share/Trash/info.x86_64-1/ delete all instances of the package manager: sudo rm -rf ~/.cache/dpkg You could also check if the package manager is located in /root/.local/share/Trash/info.x86_64-1/, but this might be protected by the root user, so I would also check in ~/.cache/dpkg. Edit: A security issue has been fixed in Ubuntu in version 19 2d92ce491b
