A: «Conclusion: After its many failed attempts, Windows never provided any method to break into the site, even though it can be accessed through Tor (the anonymizing network of the Internet).» Is that the conclusion you came to? Or are you under the impression that Tor would have solved the issue anyway? Read carefully: the conclusion says something like «in summary». «from the individual, peer-to-peer communications: Tor is perfectly capable of providing a high level of security for these kinds of applications with adequate time and bandwidth resources.» Is that the conclusion you came to? No, it's the conclusion that the author had to come to, hence the tag «opinion». This first sentence says something like «in summary, for the topic». «The rise of malware embedded in images, malware spreading through email, and malware capable of attacking host computers directly: Tor should be ready for any malware attacks from any source, and should be able to provide a simple way to contact a notification system for such attacks, if so desired by its users.» Is that the conclusion you came to? No. «The rise of malware embedded in images» is a statement of fact. «It should» is a statement of purpose. The rest is a somewhat muddled sentence. The author seems to be trying to say that Worms are a very big problem («threat», «attack»). They're common. There is an even bigger problem which everyone should see. What is the bigger problem? Is it people who don't use Tor (whose outbound traffic is a _hop_ away from their computers), or people that we don't monitor on Tor? That doesn't seem to be quite clear. «A simple way to contact a notification system for such attacks, if so desired by its users» would then fall under the category of «privacy and anonymity». «A simple way to contact a notification system for such attacks, if so desired by its users» seems more like «privacy and anonymity», at least in the context of this document. «privacy and anonymity» is a very vague term (because it's not a concrete term). This expression fails to make its meaning clear. «privacy and anonymity» is one of those vague terms which means whatever the document author wants it to mean. «Tor should ba244e880a
