To do this is quite simple. The user does not require any special knowledge or skills. We connect the smartphone to the computer and run the iptserver program. In the window that opens, go to the "Install Iphone Pro Wizard" menu and select "Intel® R.615 USB Tweaker v1.4" and in the "Integrate Iphone R.605 USB Tuners" dialog box that opens, select "Register Tweakers (12 and 5m)". If necessary, you can select "Replace USB Tab Temporarily" after which the program will offer to configure the device using the "Tweak APP" configurator. In the event that even after this the phone does not acquire the desired reaction to manipulations, we leave everything as it is. Last
