The AutoCAD program is available on Macintosh, Microsoft Windows and other operating systems. The program is available as a desktop app running on a computer with an internal graphics controller (hardware), or a free cloud-based mobile app (web app) on iOS, Android and Windows smartphones and tablets. The two are not mutually exclusive. There is also a web app that runs on a desktop browser. To prevent unauthorized use, the program requires a registration with a valid license key, which can be obtained from Autodesk. The cost of the license is \$1200, plus applicable taxes. The software runs only on operating systems using Intel x86 processors, or their successors, and is not available on any non-Intel operating systems. History The idea for AutoCAD originated in 1977 when Thomas J. Becwar, an employee of the Canadian company Stoller Computers, in Kitchener, Ontario, Canada, was asked to develop a new drafting system for a company that he had never met before. He was able to sell his system to that company (named Genesis Graphics) for \$100,000 in cash and stock. The company was later acquired by the American company Harris Graphics for \$4.5 million. When that company was acquired by Autodesk in 1992, the company called Stoller Computers incorporated its existing software into Autodesk's CAD software application. A version of the program was first sold by Stoller in 1979 and called "CAD Station", which became CADStation for the DOS and Windows operating systems. The first released version was called "AutoCAD Model I" in 1980. The first released version for the Macintosh operating system was "AutoCAD Model II" in 1981. The first version of the cloud-based mobile app for iOS was "AutoCAD Mobile", which was released in 2014. The first version of the web-based app for PC and Mac was called "AutoCAD Web", which was released in 2016. The current version, called "AutoCAD 2019", was released in May 2019. Features The AutoCAD software is used by architectural, mechanical, electrical, civil, industrial, structural, and other engineers, as well as architects and other designers. It provides a platform for the creation and review of three-dimensional design and engineering data. Design objects can be manipulated and edited, and designed using a standard set of

Note that we have used the histogram center for comparison with the experimental data, as our simulations do not account for heterogeneity in histone modification and nucleosome occupancy. Furthermore, the copy number of each histone variant is randomly drawn at each time step as per Gillespie's algorithm [\\[@CR31\\]](#). The results show that cell cycle duration is prolonged when the concentration of either H2A.Z or H3.V is decreased. Indeed, the cell cycle duration in a low-H2A.Z or low-H3.V condition is comparable to that in the no-change condition. In contrast, a high-H2A.Z or high-H3.V concentration leads to a significantly shorter cell cycle duration. In low-H2A.Z and low-H3.V conditions, cells tend to spend more time in the DNA synthesis (S) phase (Fig. [3\\(#Fig3\\){ref-type="fig"}c](#)). In contrast, in high-H2A.Z and high-H3.V conditions, cells tend to spend more time in G2 (Fig. [3\\(#Fig3\\){ref-type="fig"}d](#)). This result can be explained by the following scenario. In low-H2A.Z and low-H3.V conditions, histones are replaced faster with those carrying other modifications (lower concentrations of H2A.Z and H3.V), which leads to an earlier

entry into the S phase (Fig. [3](#Fig3){ref-type="fig"}c, left). In contrast, in high-H2A.Z and high-H3.V conditions, histones are replaced slower with a1d647c40b

BARKING dog attacks woman, one being killed One woman was killed in a dog attack in Baton Rouge, LA, where a local woman attacked a couple who had just left their granddaughter's high school graduation. The attack happened in the parking lot of the Sherwin-Williams Company just after 5pm on Wednesday. The incident, initially reported by The Advocate as a deadly dog attack, turned out to be a murder-suicide that left a woman dead and another injured. The incident happened after a man and a woman left the graduation ceremony for Sherwin-Williams and headed towards their car. As they approached their car in the parking lot, a woman who had been with the couple left, and ran towards them with her dog. The woman apparently approached the couple and swung her dog at them, hitting the man's face. The woman then stabbed the man, who was later pronounced dead at the scene. The woman was then subdued by police, who arrested her on the scene. The dog, which had blood dripping from its mouth, was later taken to an animal hospital, according to local news reports. A woman who was also at the graduation was treated for a dog bite and released. No further details about the incident have been released. 11 Facts about Soy and Gluten

Soy has become a regular part of our diets, but is it healthy or even good for you? Not only does it contain some toxic qualities, it also contains high levels of another problematic substance, gluten. We look at the pros and cons of eating soy, and what we can do about it. What is Soy? Soybeans are full of nutrients, including protein and isoflavones. They are also gluten free and can be a good alternative for gluten free diets. Nutrition: Soy is considered a protein rich food, high in fiber and it has other nutrients that a person
