Document-level automation The AutoLISP language can be used in custom macros to automate processes such as filling and deleting objects, changing properties, and modifying objects. When a user clicks on an AutoLISP function (macro) to execute, AutoLISP calls the subroutine that executes the macro. The subroutine (defun) can return any type of result (e.g. print text, open a dialog box, add objects, change the object's properties, etc.). These result values can be used by AutoCAD to execute additional macros or actions. AutoLISP macros can also read from and write to the Drafting Registry, including associating and sharing drawing properties. A user can create a macro that can perform various actions such as: Save the current drawing as a .dwg file Save the current drawing as a .dwg (dwg) file Open the associated datafile Open the associated datafile Open the

associated datafile in the previous instance of AutoCAD Open the associated datafile in a new instance of AutoCAD Open the associated datafile in the new instance of AutoCAD as another drawing AutoLISP macro subroutines can perform all of the following actions: Save a drawing state as a.dwg file Open a drawing state Open a drawing state and specify its file format Open a drawing state and specify its file format, the version of AutoCAD to open, and its datafile Open a drawing state and specify its file format, the version of AutoCAD to open, and its datafile and specify a directory in which to store the datafile Open a drawing state and specify its file format, the version of AutoCAD to open, and its datafile, as well as specify a directory in which to store the datafile, and specify the drawing project on which to store the datafile Open a drawing state and specify its file format, the version of AutoCAD to open, and its datafile, as well as specify a directory in which to store the datafile, and specify the drawing project and specify the drawing file in which to store the datafile AutoLISP macros can also control the operation of BatchDialogs, such as the Autodesk Design Review BatchDialog, by the setting of parameters.
