VIDEO: WATCH R.S. GATES INTERACT WITH THE VIDEOGRAPHY TUTORIALS R.S. GATES, FIFA HEAD OF MEDIA, RESPONDS TO ISN'T THIS A NEW INTERFACE? Yes, the fundamental controls remain the same. There's no change on the controller. SPECIFICALLY ABOUT THE NEW HYPER-MOTION TECHNOLOGY But the way that you're involved in the game changes. It changes a lot. It's much deeper, it's much more kinetic than how you were asked to play the game with FIFA '17. So I think for the fans of FIFA, and for the players, the type of things that you'll see over and above what you normally played with the game will be very, very exciting. HOW DOES THE NEW HYPER-MOTION TECHNOLOGY WORK? The new way that you

interact with the game, the way you control the game, is to -- from the positions that you're involved in the game, that you're having an active involvement in the game -- you make decisions in a very active way, in a very kinetic way, in the same way that a real footballer would play the game. In the same way that you would take an active decision on the field, you do that in the game, too. What happens? You need to make decisions. You need to be the controller, you need to be in control. And you have to make decisions that matter to affect the outcome of the game. You need to be able to make decisions from the positions that you're involved in. This is a great example: As a defender, you're at the centre point of the field. You are the centre of the centre. So when you make decisions you're in the centre. The center

of the game, centre of the universe. And as you make the right decision, the gravity affects other decisions that affect other areas of the field. All the way down to defensive-midfield. Yes, it's a controller that mimics what you're doing in real life. It's for all the players because we believe all the players in the world know how to play football, even if it's the Champions League or any other tournament. We've tried to build a game that every player understands and

Q: When $f(x)$ is continuous and $\lim_{x \rightarrow 0} f(x) = 0$, does it follow that $\lim_{x \rightarrow 0} f(x) = 0$? I am reading from an intro real analysis textbook that we need to show that $\lim_{x \rightarrow 0} (1+x)^n = 1$ for each $n \in \mathbb{N}$. This is supposed to follow from the fact that $(1+x)^n \rightarrow 1$ as $x \rightarrow 0$. This follows from the fact that $(1+x)^n = (1+o(1))^n = 1+o(1)$ for each $n \in \mathbb{N}$ by the squeeze theorem. My question is when does the condition $f(x) \rightarrow 0$ as $x \rightarrow 0$ imply that f

===== This is an online action-RPG with a lot of depth in both the gameplay and in the storytelling. This game is heavily based on physical combat with enemies, as well as the use of different weapons. The game contains several different dungeons, each with a different theme. The story is non-linear and allows the player to join at anytime. The gameplay is not easy though, requiring stamina and concentration. Each boss fight has its own uniqueness, and the
